

Lagrangian density

$$9\beta_3 \mathcal{W}_\mu \mathcal{W}'^\mu - \chi \partial_\mu \mathcal{W}_\nu \partial^\mu \mathcal{W}'^\nu + \chi \partial_\mu \mathcal{W}_\nu \partial^\nu \mathcal{W}'^\mu$$

Added source term(s): $\mathcal{W}^\alpha \mathcal{T}_{\mathcal{W}_\alpha}$

$$\mathcal{T}_{\mathcal{W}_{1^-}^{\#1}} + \alpha \frac{1}{9\beta_3 + \chi k^2} \mathcal{T}_{\mathcal{W}_{1^-}^{\#1} \alpha}$$

$$\mathcal{W}_{1^-}^{\#1} + \alpha \frac{\mathcal{W}_{1^-}^{\#1} \alpha}{9\beta_3 + \chi k^2}$$

$$\mathcal{T}_{\mathcal{W}_{0^+}^{\#1}} + \frac{1}{9\beta_3} \mathcal{T}_{\mathcal{W}_{0^+}^{\#1}}$$

$$\mathcal{W}_{0^+}^{\#1} + 9\beta_3 \mathcal{W}_{0^+}^{\#1}$$

(No source constraints)

Massive particle

Pole residue:	$-\frac{1}{\chi} > 0$
Polarisations:	3
Square mass:	$-\frac{9\beta_3}{\chi} > 0$
Spin:	1
Parity:	Odd

Unitarity conditions
 $\chi < 0 \ \&\& \ \beta_3 > 0$

(No massless particles)
